

User Experience of My Portfolio Project

Yin-Chen Kris Huang

1. Introduction

I am going to start a new website different from the one I created in the Bootstrap course. The topic is a seed company. Basic and simplistic designs will be implemented, using the “nucampsite” course materials as the main reference, in hope I can practice a shopping cart managed by Redux.

2. User Interface Design and Prototype

- The user interface will consist of a main frame to host different pages, including the default Home page, the About Us page, the Contact Us page, the Catalog page for online seed purchase and a Shopping Cart page for the customer to edit their chosen merchandise and check out.
- A few SVG pictures will be created by myself, including the company logo.
- An embedded YouTube video will be put in the Home page for beautification.

3. Navigation Structure

- A Navbar-like pagination, mainly based on CSS, will be used to navigated through the aforementioned pages in 2.
- For the Catalog page, there will be another Breadcrumb-like navigators for different categories, such ad flowering plants, vegetables, and herbs.
